MARVIN® INTRODUCES A REVOLUTIONARY, INTEGRATED INTERIOR SHADE SYSTEM

Marvin Windows and Doors is proud to introduce the most innovative integrated interior shades solution on the market, and the first window and door fashions available directly from Marvin. Available on the Ultimate Casement and Replacement Casement, Ultimate Awning and Replacement Awning, Ultimate Swinging French doors, Ultimate French and Sliding Patio doors, Marvin's Interior Shades fit seamlessly to work as an integrated solution and offer unmatched functionality, beauty and performance.

Marvin Interior Shades offer the following unique attributes and solutions:

- An integrated design made to fit seamlessly into Marvin window and door units with no measuring required
- Top-down / bottom up shade functionality allows the ability to position the shade anywhere in the window and swinging door – something not offered by other window and door manufacturers – and allows for the ultimate in privacy control and light distribution with virtually no light bleed along the edges of the surround
- A palette of 15 industry-leading colors to choose from provides flexibility for outside light distribution and privacy
- Unlike between-the glass-offerings, our solution is compatible with all glazing types including gas filled and surface coated glazings and can be used in conjunction with simulated divided lites with spacer bars unlike competitive offerings
 - Design flexibility and performance are not comprised
- To match the appearance of your Marvin windows and doors, shade surrounds can be ordered prefinished with your choice of Marvin's factory-applied interior finishes or finished in the field by others
- Concealed mechanisms and cord systems provide improved aesthetics over current shade product options on the market
- Shade material is proprietary to Marvin and features anti-static, liquid repellant, dust and soil resistant properties along with a 10-year warranty
- Flexible purchase experience allowing for shade color and opacity decisions to be made when the customer is ready and the shade to arrive when specified

WINDOW PRODUCTS AVAILABLE WITH INTERIOR SHADES

Marvin Interior Shades may be ordered on or retrofitted to the following clad and wood windows:

- Ultimate Casement
- Ultimate Replacement Casement
- Ultimate Awning
- Ultimate Replacement Awning
- Direct Glaze Rectangle/Transom only

Our unique shade system is simple to install and remove. An integrated surround preserves the view while housing both the shade and a screen that can be easily removed from the surround. The design avoids interference with the window hardware unlike after-market solutions.

An optional shade stack cover is available to aid in the clean look.

Jamb depth considerations:

- Minimum jamb depth required for the Marvin Interior Shade for the Clad Ultimate Casement and Clad Ultimate Replacement Casement is 3 1/4".
- Minimum jamb depth required for the Marvin Interior Shade on the Wood Ultimate Replacement Casement is 3 11/32".
- Minimum jamb depth required for the Marvin Interior Shade on Direct Glaze units is 4 9/16"

ULTIMATE SWINGING DOOR PRODUCTS AVAILABLE WITH INTERIOR SHADES

Marvin Interior Shades may be ordered on or retrofitted to the following clad and wood Ultimate Swinging French Door products:

- Both Inswing and Outswing doors
- 1 3/4" and 2 1/4" platforms
- Includes solution for Sidelites and Transoms
- Works with all Marvin rail and panel options including flat, raised, or stamped raised panels
- Available on Impact Zone 3 and Impact Zone 4 doors

Our Ultimate Swinging French Door Shade is designed to compliment architecture with either a traditional or contemporary surround profile that works on any of Marvin's rail or panel options. Housed in a surround that attaches securely to the door, Marvin's Interior Shade solution for the Ultimate French Swinging doors is simple to install and remove. The shade is designed to eliminate banging on the door when the door is in motion as compared to after-market offerings that require additional clips or brackets.

An optional shade stack cover is available to aid in the clean look.

Marvin's Interior Shade also does not interfere with the lock or handle hardware on the door, another benefit compared to after-market solutions.

Existing Marvin Ultimate Swinging French Door customer can enjoy the benefits of the Marvin Interior Shade design by retrofitting their door. Existing doors with Marvin's two-piece hardware designs, such as our standard hardware, Valli and Valli and Bouvet Architectural Hardware selections are retrofittable as they enable the use of spindle extenders, which are required to enable compatibility of the shades system with our swinging door products.

Jamb Considerations:

- Minimum jamb depth required for the Marvin Interior Shades on swinging doors is 4 9/16".

SLIDING DOOR PRODUCTS AVAILABLE WITH INTERIOR SHADES

Marvin Interior Shades may be ordered on the following clad and wood sliding doors:

- Ultimate Sliding French Door
- Ultimate Sliding French Door Impact Zone 3 (Clad only)
- Ultimate Sliding French Door Transom
- Sliding Patio Door
- Available on raised panels
- Available on the standard sill only
- Configurations Available
 - O, OX, XO, OOX, OXO, XOO, OXXO
 - Single wide units use top down, bottom up (swinging door) system

A first in the industry, Marvin's sliding door shade design allows both the operating and stationary shades to move with the door. No longer do you have to open your shade to operate the door. The interior shade presents a uniform appearance that aids in the seamless look because the shades and operating panel are on the same plane. When not in use, the shade stacks are completely hidden. Our integrated design means your shade will not protrude into the living space.

Sliding doors are not able to be retrofitted with Marvin Interior Shades due to changes to the sliding door design to accommodate a track for the shade and pockets to conceal the shade stack.

Due to the integrated design, sliding door Interior Shades will require installation by a service technician or trained professional.

Jamb considerations:

- Operating sliding door units require a minimum of 6 1/16" jamb extension to utilize the Interior Shade system for sliding doors. Sliding doors with Shades will default to 6 9/16" jambs.
