

The Quaker Difference

What is the Quaker Difference?

Since 1949 the Quaker Difference has been represented by a standard of quality, engineering, craftsmanship and innovation that Quaker builds into every window and door. It is that attention to detail and manufacturing excellence that distinguishes Quaker from all other window and door companies in America.

Some of The Quaker Differences include...

From Our Family to Yours — For almost 70 years Quaker has been crafting windows and doors for homes like yours. With Quaker, you know you are getting windows and doors from a family owned company built on tradition, craftsmanship and quality that have been the hallmark of our growth and success.

Architectural Engineering — The Quaker team leverages years of commercial / architectural window engineering expertise into the design of our residential windows and doors. Our higher standards mean you get a window that will perform for years to come.

Testing and Quality Control — Quality Control and Performance testing is an essential part of the Quaker Difference. Product testing is done both internally and certified independently, to meet the highest possible industry standards for structural integrity, as well as water and wind performance.

Bringing Your Outside In

VuPoint

The VuPoint Vinyl Window Series

Larger Views.

Superior Energy Efficiency.

Long-Lasting Beauty.

VuPoint is the ideal choice when you want to create an unrivaled view of the world outside, while enhancing the beauty and energy efficiency of your windows and doors.

The Quaker Difference

Structurally Enhanced Frame Design

VuPoint windows have been designed with a 3-1/4" metal reinforced multi-chambered vinyl frame that is fusion welded for enhanced structural performance and durability. Because of its superior design, VuPoint windows are able to achieve a commercial Performance Grade rating of CW50, that's comparable to windows designed for low to mid-rise buildings.

Impact Tested

You can use the VuPoint Series with confidence in coastal and high wind regions because it has been impact tested.

Structural Mulling System

VuPoint enables you to combine a variety of larger window combinations utilizing Quaker's 1/2" and 2" thermally enhanced structural mulling system that is used to connect windows together without losing structural integrity.

Why is that Important?

The VuPoint Series superior design, commercial CW50 rating and structural mulling options allow you to maximize your view with larger window combinations and narrower site lines, without compromising on strength and performance. Traditional residential windows are designed to achieve a residential industry Performance Grade rating. When combined with standard reinforced mullions, the size and structural load that the windows can handle becomes very limited. VuPoint windows provide the strength and durability of commercial grade windows, without the cost associated with commercial products.

Larger Glass Pocket

Most residential vinyl windows offer a 3/4" or less glass pocket. VuPoint has been designed with a standard 1" – 1-1/4" pocket and optional a 1-3/8" glass pocket to support thicker panes of glass that enhances both thermal performance and reduced sound transmission through the glass.

Grids/Muntins Option

The larger glass pocket for VuPoint windows allows for a variety of internal *Grids Between the Glass* (GBG) options, as well as a large selection of *Simulated Divided Lite* (SDL) combinations that replicate individual panes of glass.

Why is that Important?

VuPoint's larger glass pocket not only means thicker glass and greater energy saving performance, but also reduced sound transmission, keeping the sound out while letting the view in. Additionally, with so many internal and external grid/muntin combinations, you can create the perfect look to compliment your home.

Commercial Grade Hardware

VuPoint windows come standard with heavy-duty architectural hardware that brings strength, aesthetics and durability to every window.

Contemporary Design / Colors

VuPoint was designed with narrow site lines to create a clean, contemporary look. In addition to a variety of popular exterior colors, Quaker can also match any color you desire.

Why is that Important?

VuPoint integrates architectural grade hardware into every window for maximum performance, reliability and durability over time. Traditional residential window hardware cannot effectively support the weight and wear over time of larger window systems, thereby limiting your architectural design options. You can also select from one of Quaker's standard interior colors and match up with a wide variety of exterior color options adding a new dimension to your architectural design style.

Nailing Flange

VuPoint offers a nailing flange option for new construction applications, as well as a variety of interior and exterior trim options.

Factory Installed Extension Jamb

VuPoint also offers ability to have wood, primed, pre-finished white and composite extension jamb factory applied for easy jobsite installation.

Why is that Important?

No matter if it is new construction or remodeling, VuPoint was designed to make window installation and maintenance easy. This not only saves you time and money on installation, but you can rest easy that your VuPoint windows will maintain the Quaker standard of excellence for years to come.
